

Learn YOUR AI, not AI in general

Most courses serve everyone the same lesson. IAPLC generates content from your profile — your role, your sector, your projects. Same concepts, your reality.

The example of Sarah

Sarah is a Product Owner in luxury. A consultancy developer learns the same concept — RAG. The generic course talks about "a company chatbot on a FAQ". The level generated for Sarah talks about HER clienteling app, which knows her 400,000 product records and each client's history. Same concept. She won't forget it.

"We remember — and act on — what resembles us. Personalization isn't a comfort: it's a retention lever."

What's fixed, what's generated

FIXED · THE PEDAGOGICAL BACKBONE

- Objectives & target competencies
- Progression of the 30 levels
- Concept taught & assessment
- Guardrails & hand-written fallbacks

GENERATED · THE WRAPPING

- The scene (your setting, your role)
- The examples (your sector)
- The practical cases (your projects)
- The tone & domain vocabulary

Why it makes people learn faster

An example drawn from your own daily work anchors a concept better than a generic case: more attention, better retention, immediate action. The AI personalizes the wrapping around a stable backbone aligned with a competency framework — the rigor doesn't move, only the framing adapts.
